

Specification

Starting Method	Electric Key
Engine Brand	Briggs & Stratton
Engine Type	AVS
Engine Capacity	344cc
Net Power Output	6.3kW @ 2600rpm
Transmission	Hydrostatic
Drive	Rear Wheel
Blade Engagement	Electronic
Cutting Width	92cm / 36"
Cutting Heights	25-80mm (7 Positions)
Turning Circle	160cm
Collector Full Buzzer	Yes
Collector	260 Litres
Wheels Front	15" Rear 18"
Head Lights	Yes
Safety Features	Seat with Safety Control Breaker
Max Speed	8.8 km/hr
Fuel Tank Capacity	4.5 Litre
Battery Charger	Yes
dB Rating	100 dB
Weight	192kg
Lawn Size	1.5 to 2 acre
Dimensions	Length 236cm Width 96cm
Warranty	5 Year

This 92cm working width model is available with a manual transmission as a 1436M or with a hydrostatic transmission as a 1436H. These models also have the option of being equipped with either a Mountfield or Briggs & Stratton engine. Both are high specification garden tractors suitable for lawns of around 1.5 - 2 acres. They are easy to use with light steering and a tight turning circle, which makes them easy to manoeuvre around trees, borders and garden furniture with the minimum of effort. All Mountfield garden tractors cut wider than the wheel width which means there is little trimming left to do after the lawns have been mown.

Grass cuttings are blown from the twin bladed cutter deck into a large capacity rear mounted collector. An alarm sounds to let the driver know when the collector is full, which is a valuable feature as there is nothing worse than overfilling the collector and then having to unblock the discharge chute by hand – at least you know when the collector is full on a Mountfield!

Emptying the collector is done from the driving seat; simply pull the tipping lever and the collector opens wide emptying out the clippings, you don't need to get off the tractor at all. It also features an adjustable seat for added comfort and ease.

Engaging the cutter deck couldn't be easier; you just have to pull the control switch for "On" and push it in for "Off". It has seven preset cutting heights ranging from 25mm to 80mm selected by using the lever located conveniently at the side of the seat. No tools are necessary and the cutting height can also be adjusted on the move.
